

Data Retention

Automate retention and minimization, find expired files, archive or delete with proof, cut risk, cost, and audit time.

Delete Risk, Keep What Matters

Retention programs fail when you cannot prove what you kept, why you kept it, and why you deleted anything at all. That is how organizations end up with redundant content, stale ownership, and sensitive data kept long past its useful life. Lightbeam links sensitive data to the people it represents so teams can apply retention with identity-aware context and relevant dates surfaced from within documents, not just folders and file metadata attributes. By surfacing duplicates and stale ownership, and tying those risks back to whose data is affected, Lightbeam helps reduce over-retention and take action with confidence. The result is defensible deletion backed by audit-ready reporting that stands up to scrutiny.

“The alternative to not having a solution like Lightbeam would have been to hire 10 people to manually perform all of the functions it provides automatically.”

Martin Parent, VP of Operations, AGA Benefits Group

90%

Reduction in manual data security and privacy operations

75%

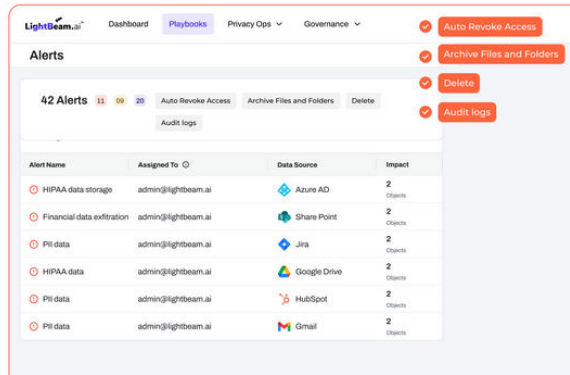

Faster remediation of risky data access

80%

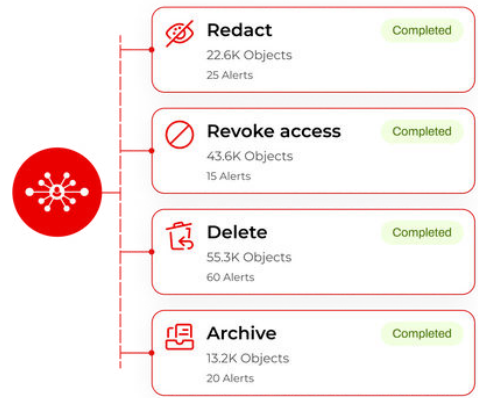

Less time needed to prepare audit reports

Shrink Exposure, Prove Deletion

Find expired data across cloud, SaaS, and On-Prem, then archive or delete with audit trails that stand up to reviews and reduce attack surface.

Alert Name	Assigned To	Data Source	Impact
HPAA data storage	admin@lightbeam.ai	Azure AD	2 Objects
Financial data exfiltration	admin@lightbeam.ai	Share Point	2 Objects
PII data	admin@lightbeam.ai	Jira	2 Objects
HPAA data	admin@lightbeam.ai	Google Drive	2 Objects
PII data	admin@lightbeam.ai	HubSpot	2 Objects
PII data	admin@lightbeam.ai	Gmail	2 Objects

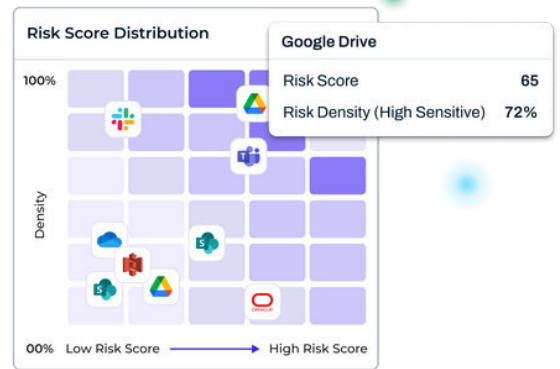

Reduce Legal Risk, Cut Noise

Enforce policy on contract dates and file types, avoid conflicts with legal holds, and give auditors evidence without spreadsheets or manual hunts.

Save Storage, Speed Ops

Eliminate ROT and duplicates, set rules for SMB folders and cloud drives, focus teams on high value work using risk scores and quick insights.

Data Visibility

Know WHAT data you have across Cloud, SaaS and On-prem apps.

Data Identity

See WHOSE data you have, WHERE (customers, employees, vendors).

Data Access

Enforce policies around WHO should have access to WHOSE data.
